PROFESSIONAL SUMMARY

Computers and Information student at Ain Shams University seeking an automation internship. Built 16 self-directed projects, including 8 n8n workflows, AI agents, RAG pipelines, and full-stack web applications, using n8n, OpenAI, Python, TypeScript, and Supabase. Focused on turning repetitive manual business processes into automated systems that run end to end.

EDUCATION

Bachelor of Science (B.Sc.) in Computers and Information
Ain Shams University, Cairo, Egypt | Expected June 2029
Relevant coursework: Object-Oriented Programming (Java), Discrete Mathematics, Web Development

CERTIFICATIONS

- FortyGuard Hackathon'26, Certificate of Completion | FortyGuard | August 2026 | Project: Thermal Siting Console, a data centre thermal headroom monitoring system
- The 7-Day AIS Challenge | AI Automation Society | October 2026 | Credential ID: AIS-0180

TECHNICAL SKILLS

Automation: n8n (self-hosted), workflow automation, process automation, webhooks, schedule and form triggers, conditional branching, data mapping, Trigger.dev

AI and LLMs: OpenAI API (GPT-4, GPT-4.1 mini, GPT-4o-mini, embeddings, image generation), Google Gemini, Claude Code, AI agents, tool calling, conversational memory, retrieval-augmented generation (RAG), Pinecone vector database, prompt engineering, text classification, structured data extraction

Programming: JavaScript, TypeScript, Python, SQL, HTML, CSS, Java

Web and Databases: Node.js, Express, Next.js, React, Tailwind CSS, EJS, Supabase, PostgreSQL, REST APIs, authentication and access control, Vercel

Integrations: WhatsApp (Evolution API), Google Drive, Google Sheets, Gmail, Google Calendar, LinkedIn API, YouTube Data API, Tavily Search API, Airtable, Slack

Tools and Practices: Git, GitHub, Docker, Cloudflare Tunnel, pandas, matplotlib, unit testing, end-to-end testing, security testing, technical documentation

PROJECTS

Self-directed portfolio projects, April 2026 to Present

Document RAG Pipeline and Knowledge Chatbot

Technologies: n8n, OpenAI, Pinecone, Google Drive

- Automated document ingestion: each new Google Drive upload is chunked, embedded with OpenAI, and stored in Pinecone with no manual step
- Designed a retrieval agent with conversational memory that answers strictly from indexed documents, reusable for policy documents, product catalogs, and legal documentation

AI Customer Support Triage System

Technologies: n8n, Gmail, OpenAI, Google Gemini, Pinecone

- Classified inbound email with an OpenAI Text Classifier so only messages that need a response reach the agent, while spam and irrelevant mail get no reply
- Built the responding agent on Google Gemini with a Pinecone knowledge base and memory of each customer

WhatsApp Booking Chatbot (Demo)

Technologies: n8n, Evolution API, OpenAI, PostgreSQL, Supabase, Docker

- Built an AI agent for a demo multi-branch barbershop that looks up branches, services, and availability, then creates bookings through SQL tools and emails a confirmation
- Deployed self-hosted n8n and Evolution API in Docker behind a Cloudflare Tunnel, with chat memory per customer phone number in PostgreSQL

Dental Website Lead Finder

Technologies: TypeScript, Trigger.dev, Airtable, Slack

- Scheduled a weekly job that finds independent dental practices in Canada and Australia, grades each one by website and online booking status, and saves leads to Airtable
- Rotated through 12 cities to avoid repeat leads, and covered the job with 37 unit tests

Weekly YouTube AI Trend Report

Technologies: Python, Claude Code, YouTube Data API, pandas, matplotlib

- Automated a weekly scan of 15 AI and automation keywords, scoring videos by view velocity and engagement and rendering four charts
- Generated a slide deck, uploaded it to Google Drive as Google Slides, and emailed it with no manual step

Eva Scarf Online Store

Technologies: Node.js, Express, EJS, Tailwind CSS, Supabase, Brevo, Vercel

evascarf.vercel.app | github.com/ahmedsaadd249/Eva-Scarf

- Built an Arabic-first bilingual store with cart, cash on delivery checkout, sign-in by one-time email code, and an owner dashboard that emails customers on each status change
- Calculated prices only on the server and updated stock in one transaction so two customers cannot buy the last piece
- Tested with unit tests, browser tests of every flow, and an attack suite covering CSRF, XSS, SQL injection, and price tampering

Lumora Dental Clinic Booking System (Demo)

Technologies: Node.js, JavaScript, HTML, CSS, Supabase, Nodemailer, Vercel

lumoa-dental.vercel.app

- Built an Arabic and English clinic site with booking, patient accounts, and a staff dashboard where each status change emails the patient in their language
- Automated reminders 24 hours and 1 hour before each visit, followed by a rating link for the clinic and the dentist
- Restricted each dentist to their own visits, and secured patient log-ins with email confirmation, hashed passwords, and limits on wrong attempts

Rally AI Fitness Coach App

Technologies: Next.js, React, TypeScript, n8n, OpenAI, Vercel

github.com/ahmedsaadd249/fit-coach-AI-App

- Turned an n8n coaching workflow into a deployed chat application with session memory and a 10-level progress system
- Kept webhook credentials out of the browser with a server-side API route, and added per-IP rate limits and a 25-second timeout

Additional Projects

- **Content Generation and Publishing Pipeline (n8n):** Turned one topic into a researched post and image, logged it to Google Sheets, and published it to LinkedIn using two AI agents and the Tavily Search API
- **Student Complaint Handling System (n8n):** Checked each student's history in Google Sheets before drafting a reply, then logged the complaint, emailed the student, and verified the record
- **Conversational Personal Assistant Agent (n8n):** Used GPT-4.1 mini to choose between contact lookup, Gmail, Google Calendar, and memory tools from one natural-language message
- **Invoice Data Extraction Pipeline (n8n):** Extracted supplier, invoice number, amount, and date from PDF invoices into Google Sheets, then emailed a summary to the responsible team member
- **Bulk Image Processing Pipeline (n8n):** Edited images added to Google Drive with OpenAI, uploaded the results, and sent Gmail notices, targeting high-volume e-commerce catalogs
- **AI Newsletter Generator (Python):** Produced a sourced HTML newsletter with charts and a hero image from one topic, with approval required before sending through the Gmail API
- **Remote Jobs Web Scraper (Firecrawl):** Scraped 210 job listings across 7 result pages into clean CSV and JSON files, with salary text split into structured fields
- **Personal Portfolio Website (HTML, CSS, JavaScript):** Built a single page with no framework that draws workflow diagrams in SVG from real n8n exports

ADDITIONAL INFORMATION

- Technical writing: Publishes breakdowns of automation builds on LinkedIn, documenting node-level architecture and design reasoning
- Languages: Arabic (native), English (professional working proficiency)
